1 [Technical papers: Towards topic-based summarization for interactive document viewing](#) 

 Achim Hoffmann, Son Bao Pham

October 2003 **Proceedings of the 2nd international conference on Knowledge capture K-CAP '03**

Publisher: ACM Press

Full text available:  [pdf\(120.31 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Our research aims at interactive document viewers that can select and highlight relevant text passages on demand. Another related objective is the generation of topic-specific summaries of texts as opposed to general purpose summaries. This paper introduces our notions of *discourse structure tree* and *level-of-detail tree*. Both structures are used to represent relevant aspects of a text segment for the above mentioned purposes. Furthermore, we introduce a Knowledge Acquisition Frame ...

Keywords: knowledge acquisition, natural language processing

2 [Information fusion in the context of multi-document summarization](#) 

Regina Barzilay, Kathleen R. McKeown, Michael Elhadad

June 1999 **Proceedings of the 37th annual meeting of the Association for Computational Linguistics on Computational Linguistics**

Publisher: Association for Computational Linguistics

Full text available:  [pdf\(807.95 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We present a method to automatically generate a concise summary by identifying and synthesizing similar elements across related text from a set of multiple documents. Our approach is unique in its usage of language generation to reformulate the wording of the summary.

terms

We introduce OCELOT, a prototype system for automatically generating the "gist" of a web page by summarizing it. Although most text summarization research to date has focused on the task of news articles, web pages are quite different in both structure and content. Instead of coherent text with a well-defined discourse structure, they are more often likely to be a chaotic jumble of phrases, links, graphics and formatting commands. Such text provides little foothold for extractive ...

4 Dissertation abstracts: Automatic summarization focusing on document genre and text structure

Yohei Seki

June 2005 **ACM SIGIR Forum**, Volume 39 Issue 1**Publisher:** ACM PressFull text available:  pdf(164.94 KB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

This dissertation proposes a new automatic summarization method focusing on *document genre* and *text structure*, and verifies its effectiveness. "*Document genre*" refers to the type of document, such as a diary or a report. "*Text structure*" refers to the functional aspects of the text and divides the text into sentence units or components, according to their functional roles. This type of structure includes both the components and their organization within the text of a ...

5 Automatic text summarization based on the Global Document Annotation

Katashi Nagao, Kôiti Hasida

August 1998 **Proceedings of the 17th international conference on Computational linguistics - Volume 2 , Proceedings of the 36th annual meeting on Association for Computational Linguistics - Volume 2****Publisher:** Association for Computational Linguistics , Association for Computational LinguisticsFull text available:  pdf(476.15 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

The GDA (Global Document Annotation) project proposes a tag set which allows machines to automatically infer the underlying semantic/pragmatic structure of documents. Its objectives are to promote development and spread of NLP/AI applications to render GDA-tagged documents versatile and intelligent contents, which should motivate WWW (World Wide Web) users to tag their documents as part of content authoring. This paper discusses automatic text summarization based on GDA. Its main features are a ...

6 Summarization: Topic themes for multi-document summarization

Sanda Harabagiu, Finley Lacatusu

August 2005 **Proceedings of the 28th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '05****Publisher:** ACM PressFull text available:  pdf(245.85 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The problem of using topic representations for multi-document summarization (MDS) has received considerable attention recently. In this paper, we describe five different topic representations and introduce a novel representation of topics based on topic themes. We present eight different methods of generating MDS and evaluate each of these methods on a large set of topics used in past DUC workshops. Our evaluation results show a significant improvement in the quality of summaries based on topic ...

Keywords: summarization, topic themes

7 Scalable collection summarization and selection

R. Dolin, D. Agrawal, E. El Abbadi

 **August 1999 Proceedings of the fourth ACM conference on Digital libraries****Publisher:** ACM PressFull text available:  pdf(263.57 KB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)**Keywords:** automated classification, metadata, resource discovery, scalability**8 Annotation-based multimedia summarization and translation** 

Katashi Nagao, Shigeki Ohira, Mitsuhiro Yoneoka

August 2002 Proceedings of the 19th international conference on Computational linguistics - Volume 1**Publisher:** Association for Computational LinguisticsFull text available:  pdf(366.61 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

This paper presents techniques for multimedia annotation and their application to video summarization and translation. Our tool for annotation allows users to easily create annotation including voice transcripts, video scene descriptions, and visual/auditory object descriptions. The module for voice transcription is capable of multilingual spoken language identification and recognition. A video scene description consists of semi-automatically detected keyframes of each scene in a video clip and ...

9 Links for a better web: Enhanced web document summarization using hyperlinks 

J.-Y. Delort, B. Bouchon-Meunier, M. Rifqi

August 2003 Proceedings of the fourteenth ACM conference on Hypertext and hypermedia**Publisher:** ACM PressFull text available:  pdf(167.88 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper addresses the issue of Web document summarization. As textual content of Web documents is often scarce or irrelevant and existing summarization techniques are based on it, many Web pages and websites cannot be suitably summarized. We consider the context of a Web document by the textual content of all the documents linking to it. To summarize a target Web document, a context-based summarizer has to perform a preprocessing task, during which it will be decided which pieces of informati ...

Keywords: context, hyperlinks, summarization, web document**10 Query-relevant summarization using FAQs** 

Adam Berger, Vibhu O. Mittal

October 2000 Proceedings of the 38th Annual Meeting on Association for Computational Linguistics ACL '00**Publisher:** Association for Computational LinguisticsFull text available:  pdf(190.25 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

This paper introduces a statistical model for *query-relevant summarization*: succinctly characterizing the relevance of a document to a query. Learning parameter values for the proposed model requires a large collection of summarized documents, which we do not have, but as a proxy, we use a collection of FAQ (frequently-asked question) documents. Taking a learning approach enables a principled, quantitative evaluation of the proposed system, and the results of some initial experiments---on ...

11 Compression and summarization: A noisy-channel model for document compression 

Hal Daumé, Daniel Marcu

July 2001 **Proceedings of the 40th Annual Meeting on Association for Computational Linguistics ACL '02**

Publisher: Association for Computational Linguistics

Full text available:  pdf(124.62 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

We present a document compression system that uses a hierarchical noisy-channel model of text production. Our compression system first automatically derives the syntactic structure of each sentence and the overall discourse structure of the text given as input. The system then uses a statistical hierarchical model of text production in order to drop non-important syntactic and discourse constituents so as to generate coherent, grammatical document compressions of arbitrary length. The system out ...

12 A trainable document summarizer

 Julian Kupiec, Jan Pedersen, Francine Chen

July 1995 **Proceedings of the 18th annual international ACM SIGIR conference on Research and development in information retrieval**

Publisher: ACM Press

Full text available:  pdf(657.48 KB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

13 Multidocument summarization via information extraction

Michael White, Tanya Korelsky, Claire Cardie, Vincent Ng, David Pierce, Kiri Wagstaff

March 2001 **Proceedings of the first international conference on Human language technology research HLT '01**

Publisher: Association for Computational Linguistics

Full text available:  pdf(72.44 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

We present and evaluate the initial version of RIPTIDES, a system that combines information extraction, extraction-based summarization, and natural language generation to support user-directed multidocument summarization.

14 Document analysis 1: Semantic thumbnails: a novel method for summarizing document collections

 Arijit Sengupta, Mehmet Dalkilic, James Costello

October 2004 **Proceedings of the 22nd annual international conference on Design of communication: The engineering of quality documentation**

Publisher: ACM Press

Full text available:  pdf(197.95 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The concept of thumbnails is common in image representation. A thumbnail is a highly compressed version of an image that provides a small, yet complete visual representation to the human eye. We propose the adaptation of the concept of thumbnails to the domain of documents, whereby a thumbnail of any document can be generated from its semantic content, providing an adequate amount of information about the documents. However, unlike image thumbnails, document thumbnails are mainly for the cons ...

Keywords: document semantics, document summarization, semantic web, thumbnails

15 Multidocument summarization: An added value to clustering in interactive retrieval

 Manuel J. Maña-López, Manuel De Buenaga, José M. Gómez-Hidalgo

April 2004 **ACM Transactions on Information Systems (TOIS)**, Volume 22 Issue 2

Publisher: ACM Press

Full text available:  pdf(199.91 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#), [review](#)

A more and more generalized problem in effective information access is the presence in the same corpus of multiple documents that contain similar information. Generally, users may be interested in locating, for a topic addressed by a group of similar documents, one or several particular aspects. This kind of task, called instance or aspectual retrieval, has been explored in several TREC Interactive Tracks. In this article, we propose in addition to the classification capacity of clustering techn ...

The huge text archives and retrieval systems of legal information have not achieved yet the representation in the well-known subject-oriented structure of legal commentaries. Content-based classification and text analysis remains a high priority research topic. In the joint KONTERM, SOM and LabelSOM projects, learning techniques of neural networks are used to achieve similar high compression rates of classification and analysis like in manual legal indexing. The produced maps of legal text co ...

17 Summarization-based query expansion in information retrieval 

Tomek Strzalkowski, Jin Wang, Bowden Wise

August 1998 **Proceedings of the 17th international conference on Computational linguistics - Volume 2 , Proceedings of the 36th annual meeting on Association for Computational Linguistics - Volume 2**

We discuss a semi-interactive approach to information retrieval which consists of two tasks performed in a sequence. First, the system assists the searcher in building a comprehensive statement of information need, using automatically generated topical summaries of sample documents. Second, the detailed statement of information need is automatically processed by a series of natural language processing routines in order to derive an optimal search query for a statistical information retrieval sys ...

18 Trainable, scalable summarization using robust NLP and machine learning 

Chinatsu Aone, Mary Ellen Okurowski, James Gorlinsky

August 1998 **Proceedings of the 17th international conference on Computational linguistics - Volume 1 , Proceedings of the 36th annual meeting on Association for Computational Linguistics - Volume 1**

 [Publisher Site](#)

We describe a trainable and scalable summarization system which utilizes features derived from information retrieval, information extraction, and NLP techniques and on-line resources. The system combines these features using a trainable feature combiner learned from summary examples through a machine learning algorithm. We demonstrate system scalability by reporting results on the best combination of summarization features for different document sources. We also present preliminary results from ...

19 Generic text summarization using relevance measure and latent semantic analysis Yihong Gong, Xin LiuSeptember 2001 **Proceedings of the 24th annual international ACM SIGIR conference on Research and development in information retrieval**

Publisher: ACM Press

Full text available:  pdf(173.90 KB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper, we propose two generic text summarization methods that create text summaries by ranking and extracting sentences from the original documents. The first method uses standard IR methods to rank sentence relevances, while the second method uses the latent semantic analysis technique to identify semantically important sentences, for summary creations. Both methods strive to select sentences that are highly ranked and different from each other. This is an attempt to create a summa ...

Document clustering has not been well received as an information retrieval tool. Objections to its use fall into two main categories: first, that clustering is too slow for large corpora (with running time often quadratic in the number of documents); and second, that clustering does not appreciably improve retrieval. We argue that these problems arise only when clustering is used in an attempt to improve conventional search techniques. However, looking at clustering as an informa ...

1 [Technique for automatically correcting words in text](#)

Karen Kukich

December 1992 **ACM Computing Surveys (CSUR)**, Volume 24 Issue 4**Publisher:** ACM PressFull text available: [pdf\(6.23 MB\)](#)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Research aimed at correcting words in text has focused on three progressively more difficult problems: (1) nonword error detection; (2) isolated-word error correction; and (3) context-dependent word correction. In response to the first problem, efficient pattern-matching and n-gram analysis techniques have been developed for detecting strings that do not appear in a given word list. In response to the second problem, a variety of general and application-specific spelling cor ...

2 [Fast detection of communication patterns in distributed executions](#)

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research****Publisher:** IBM PressFull text available: [pdf\(4.21 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

Our research aims at interactive document viewers that can select and highlight relevant text passages on demand. Another related objective is the generation of topic-specific summaries of texts as opposed to general purpose summaries. This paper introduces our notions of *discourse structure tree* and *level-of-detail tree*. Both structures are used to represent relevant aspects of a text segment for the above mentioned purposes. Furthermore, we introduce a Knowledge Acquisition Frame ...

April 1985 **ACM SIGART Bulletin**, Issue 92

Publisher: ACM Press

Full text available:  [pdf\(8.79 MB\)](#) Additional Information: [full citation](#), [abstract](#)

The papers in this special issue were compiled from responses to the announcement in the July 1984 issue of the SIGART newsletter and notices posted over the ARPAnet. The interest being shown in this area is reflected in the sixty papers received from over six countries. About half the papers were received over the computer network.

5 Annotation-based multimedia summarization and translation

Katashi Nagao, Shigeki Ohira, Mitsuhiro Yoneoka

This paper presents techniques for multimedia annotation and their application to video summarization and translation. Our tool for annotation allows users to easily create annotation including voice transcripts, video scene descriptions, and visual/auditory object descriptions. The module for voice transcription is capable of multilingual spoken language identification and recognition. A video scene description consists of semi-automatically detected keyframes of each scene in a video clip and ...

Listening to a speech recording is much more difficult than visually scanning a document because of the transient and temporal nature of audio. Audio recordings capture the richness of speech, yet it is difficult to directly browse the stored information. This article describes techniques for structuring, filtering, and presenting recorded speech, allowing a user to navigate and interactively find information in the audio domain. This article describes the SpeechSkimmer system for interacti ...

Publisher: ACM Press

Full text available:  pdf(13.13 MB) Additional Information: [full citation](#), [abstract](#)

In the fall of 1978 we decided to produce a special issue of the SIGART Newsletter devoted to a survey of current knowledge representation research. We felt that there were twe useful functions such an issue could serve. First, we hoped to elicit a clear picture of how people working in this subdiscipline understand knowledge representation research, to illuminate the issues on which current research is focused, and to catalogue what approaches and techniques are currently being developed. Secon ...

We have applied speech recognition and text-mining technologies to a set of recorded outbound marketing calls and analyzed the results. Since speaker-independent speech recognition technology results in a significantly lower recognition rate than that found when the recognizer is trained for a particular speaker, we applied a number of post-processing algorithms to the output of the recognizer to render it suitable for the Textract text mining system. We indexed the call transcri ...

In this paper, each document is represented by a weighted graph called a text relationship map. In the graph, each node represents a vector of nouns in a sentence, an undirected link connects two nodes if two sentences are semantically related, and a weight on the link is a value of the similarity between a pair of sentences. The vector similarity can be computed as the inner product between corresponding vector elements. The similarity is based on the word overlap between the corresponding s ...

Suhit Gupta, Gail Kaiser, David Neistadt, Peter Grimm

May 2003 **Proceedings of the 12th international conference on World Wide Web****Publisher:** ACM PressFull text available:  [pdf\(296.17 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Web pages often contain clutter (such as pop-up ads, unnecessary images and extraneous links) around the body of an article that distracts a user from actual content. Extraction of "useful and relevant" content from web pages has many applications, including cell phone and PDA browsing, speech rendering for the visually impaired, and text summarization. Most approaches to removing clutter or making content more readable involve changing font size or removing HTML and data components such as imag ...

Klaus Zechner, Alex Waibel

July 2000 **Proceedings of the 18th conference on Computational linguistics - Volume 2**

Publisher: Association for Computational Linguistics

Full text available:  [pdf\(699.63 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

In this paper, we present a summarization system for spontaneous dialogues which consists of a novel multi-stage architecture. It is specifically aimed at addressing issues related to the nature of the texts being spoken vs. written and being dialogical vs. monological. The system is embedded in a graphical user interface and was developed and tested on transcripts of recorded telephone conversations in English and Spanish (CALLHOME).

17 Conference abstracts 

 January 1977 **Proceedings of the 5th annual ACM computer science conference**

Publisher: ACM Press

Full text available:  [pdf\(3.14 MB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

One problem in computer program testing arises when errors are found and corrected after a portion of the tests have run properly. How can it be shown that a fix to one area of the code does not adversely affect the execution of another area? What is needed is a quantitative method for assuring that new program modifications do not introduce new errors into the code. This model considers the retest philosophy that every program instruction that could possibly be reached and tested from the ...

18 An annotated bibliography of computer supported cooperative work 

 Saul Greenberg

July 1991 **ACM SIGCHI Bulletin**, Volume 23 Issue 3

Publisher: ACM Press

Full text available:  [pdf\(4.27 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Computer-supported cooperative work (CSCW) is a new multi-disciplinary field with roots in many disciplines. Due to the area's youth and diversity, few specialized books or journals are available, and articles are scattered amongst diverse journals, proceedings and technical reports. Building a CSCW reference library is particularly demanding, for it is difficult for the new researcher to discover relevant documents. To aid this task, this article compiles, lists and annotates some of the current ...

19 Form management

D. Tsichritzis
July 1982 **Communications of the ACM**, Volume 25 Issue 7

Publisher: ACM Press

Full text available: [pdf\(2.78 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper consists of three interrelated parts. In the first part forms are introduced as an abstraction and generalization of business paper forms. A set of facilities for the manipulation of forms and their contents is outlined. Forms can be created, stored, found, viewed in different media, mailed, and located by office workers. Data on forms can also be processed in a completely integrated way. The facilities are discussed both abstractly and in relation to a prototype ...

Full text available: [pdf\(130.01 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper presents new approaches to *headline generation* for English newspaper texts, with an eye toward the production of document surrogates for document selection in cross-language information retrieval. This task is difficult because the user must make decisions about relevance based on (often poor) translations of retrieved documents. To facilitate the decision-making process we need translations that can be assessed rapidly and accurately; our approach is to provide an English head ...
